Tik-61.182, Instructions for transparencies and project report

All written material should be returned to Krista Lagus (room C311, krista.lagus@hut.fi). The material is evaluated and forms part of the grade.

Transparencies

When presenting your topic, you should have clear transparencies of the material, containing the main points of the topic in a clear, well-organized, and understandable manner, and in a large enough font (about 18pt). Use of examples and figures is recommended. The recommended formats are: Powerpoint, Latex slides, or HTML.

As part of the course requirements, you should provide a *written summary of your topic*. Copies of the transparencies fulfill this requirement, if the overheads are very good and clear, and if you also sign and return the **copyright form** (and preferably the source files of the overheads as well). Another way to fullfill this requirement is to write a well-organized summary in the form of an essay.

You should also hand out copies of the summary to other participants of the course in the beginning of your presentation. Please prepare enough copies in advance (they can be copied using the laboratory's copy machine).

Deadline for written summary: the day of your presentation.

Project plan

To get feedback on the choice of the project, you are required to write a project plan of about 1/2 A4, describing what you intend to do in your project.

Deadline for project plan: one week before your seminar presentation.

Project Report

Describe your project work in a brief, clear report of about 5 pages. The report should contain

- an abstract,
- a clear introduction that describes the problem setting and goals,
- brief description of the methods and parameters used in the analysis,
- description of the results,
- conclusions, and
- references.

Deadline for written project report: 31.5.2000
