

## Erratum: ICANN/PASCAL2 Challenge: MEG Mind Reading – Overview and Results

This erratum is for the article **ICANN/PASCAL2 Challenge: MEG Mind Reading** published in *Proceedings of ICANN/PASCAL2 Challenge: MEG Mind Reading*, Aalto University publication series SCIENCE + TECHNOLOGY 29/2011. The erratum was published January 23rd, 2012.

The description of the data on page 7 is erroneous. The text claims that the data provided for download contains the envelopes of band-pass filtered signals, which is incorrect. Instead, the downloadable data contains the actual band-pass filtered signals.

The sentence reading “*We applied a bank of 5 band-pass filters peaked at 2, 5, 10, 20, and 35Hz, and computed the envelopes of the signals at these frequencies by taking the absolute value of the Hilbert-transformed signal.*” should be “*We applied a bank of 5 band-pass filters peaked at 2, 5, 10, 20, and 35Hz, and distribute these filtered signals.*”. Furthermore, the phrase “*and the envelopes at the five frequencies mentioned above*” should be replaced with “*and the band-pass filtered signals at the five frequencies mentioned above*”.
